

Respect – Design and thinking creatively is expressive and personal. We recognise this and work together as a team, respecting the designs and creations of others.

Resilience – Our Design and Technology curriculum equips our children with the right processes and skills to stay the course and be inventive.

Independence – Through the teaching of the design process, the children are better enabled to work independently:

- Plan/Design
- Make
- Evaluate
- Apply technical knowledge

Exceptional – In Design and Technology we build links and connections with the working world, taking our lessons out of the classroom and into the wider community, making our work purposeful finishing beyond the classroom.

High aspirations – The best in design and technology surrounds us every day; our children are encouraged to engage with this and look at present problems that can be solved through clever, new solutions.

Creativity – Designing and exploring is fun! we aim to foster creativity in our children by exposing them to the successful designs of others, how these designs came to be and how valuable and useful they are today.
