

Geography Intent

Respect – Our Geography curriculum teaches children to respect the environment and world in which they live. Geography teaches us how to care for the world about us and reduce our human footprint. It looks at sustainable development and the future of our earth.

Exceptional – Geography helps children aspire to understand the world around us. We study the physical and human geography and our human impact on the earth. We look at the diversity of the world and study cultures. Developing our understanding as to how to protect our planet.

Resilience – In Geography we give the children the knowledge to understand the places which humans live on the earth. We conduct fieldwork and ask questions about the future of the earth and the changes which we have seen.

Independence – In Geography, we give the children the knowledge to develop an understanding of places and environments. We look at the local area and the wider world and develop an understanding of how we can improve the future.

Creativity – We are creative in our approach to the study of Geography. Looking for solutions to help protect the planet. Studying, green initiatives and what we can do to reduce human impact on the planet.

High aspirations – Our Geography curriculum consists of knowledge and skills. We aim to give children the skills to acquire the knowledge which they need. We ask questions to improve our understanding and we devise fieldwork to find out the answers to the questions which we ask. Collating and concluding from the results.
